

Acid, Base, or Neutral?

Use homemade cabbage juice test strips to find out if liquids around your home are acidic, alkaline (basic), or neutral. Keep track of your results on this sheet - you can glue or tape your dry test strips into the space next to each substance you test! Remember to draw a conclusion about each once and record it in the result section. Remember, acids will turn the strips pink or red while bases change the strips to green or yellow.

To learn how to make and use the test strips, view the complete project online [here](#).

Substance	Test Strip	Result (acid, base, or neutral?)
