

GLOW IN THE DARK SLIME

WHAT YOU NEED:

- Small bowl
- Glow in the dark powder
- Measuring cup
- Green food coloring
- Liquid laundry starch
- Elmer's clear glue

Learn how to make glow in the dark slime with this easy slime recipe. Perfect for Halloween (or any time or reason, really), Glow in the Dark Slime is not only fun, but also a great hands-on science learning opportunity! This slime recipe is super easy for beginners, yet packs a 'cool' element for the older kiddos. By using laundry starch and clear glue, your slime recipe is sure to 'wow'!

WHAT YOU DO:

1. Place a bowl on the table. Add one cup of glue and 1/2 a cup of water into the bowl.

2. Add green food coloring (just a drop) and your glow in the dark powder and stir.

3. Fill your measuring cup 3/4 of the way full of starch. Carefully pour the starch into the glue cream mixture while you stir.

4. It's easy to add too much starch to slime, so stop adding starch as soon as the slime "gels." But, if your slime is really sticky, you may need to add a bit more starch.

5. Place the slime outside in bright sunlight for an hour, then bring it back inside

TIP

Use plastic cups and sticks to mix so you can throw away all of the materials when your slime is made and ready for play!

PLAYING WITH YOUR SLIME:

The slime will be green in daylight, but when you bring it BACK into a dark room, suddenly, it will start to glow! The longer you leave the slime in the sun the brighter and longer it will glow in the dark.
