

## Easter Egg Experiment

You can use natural dyes made from vegetables to make many different colors of eggs! Try boiling red cabbage (sliced), fresh or frozen spinach, fresh or frozen beets (sliced), or yellow onion skins to make a dye. Strain the colored liquid that's leftover from cooking into a bowl. Add a tablespoon or two of vinegar then dip your egg in! Write down what color it made the egg (you can draw what the egg looks like, too). Then, write (or draw) what you used to make the dye. How long did you boil the vegetables for? How long did you let the egg sit in the bowl of dye? If you like, try it again, and keep using this worksheet to keep track of each dye experiment.
