

Exploring Creation With Physics

Table of Contents

Module 1 : Measurement and Units

Introduction	1
Units of Measurement	2
The Metric System	2
Manipulating Units	4
Converting Between Units	6
Derived Units	12
Making Measurements	16
Accuracy, Precision, and Significant Figures	18
Scientific Notation	21
Using Significant Figures in Mathematical Problems	24
Experiment 1.1 : Comparing Conversions To Measurements	26
Density	27
Experiment 1.2 : The Density of Liquids	28

Module 2 : Motion in One Dimension

Introduction	37
Distance and Displacement	37
Speed and Velocity	40
Average and Instantaneous Velocity	44
Experiment 2.1 : Measuring Velocity over Different Time Intervals	52
Acceleration	54
Experiment 2.2 : Measuring an Object's Acceleration	55
Average and Instantaneous Acceleration	57

Module 3 : One-Dimensional Motion Equations and Free Fall

Introduction	69
Relating Velocity, Acceleration, and Time	69
Relating Velocity, Acceleration, and Displacement	72
Relating Displacement, Velocity, Acceleration, and Time	76
Using Our Equations for One-Dimensional Motion	80
Free Fall	84
Experiment 3.1 : The Acceleration Due To Gravity is the Same	85
Experiment 3.2 : Determining a Person's Reaction Time	87
A More Detailed Look at Free Fall	90
Terminal Velocity	94

Module 4 : Two-Dimensional Vectors

Introduction	105
Vectors	105
Adding and Subtracting Two-Dimensional Vectors: The Graphical Way	108
Adding and Subtracting Two-Dimensional Vectors: The Analytical Way	113

Applying Vector Addition to Physical Situations	123
Module 5 : Two-Dimensional Motion	
Introduction	139
Navigation in Two Dimensions	139
Projectile Motion in Two Dimensions	143
The Range Equation	150
Experiment 5.1	156
Two-Dimensional Situations in Which You Cannot Use Equation (5.9)	157
Module 6 : Newton's Laws	
Introduction	177
Sir Isaac Newton	177
Newton's First Law	178
Experiment 6.1 : Inertia	179
Newton's Second Law	181
Mass and Weight	183
The Normal Force	188
Analyzing Situations With Friction	190
Newton's Third Law	199
Module 7 : Applications of Newton's Second Law	
Introduction	213
Translational Equilibrium	213
Rotational Motion and Torque	222
Experiment 7.1 : What Causes Rotational Motion?	223
Rotational Equilibrium	228
Objects on an Inclined Surface	232
Experiment 7.2	234
Applying Newton's Second Law to More Than One Object at a Time	238
Module 8 : Uniform Circular Motion and Gravity	
Introduction	255
Uniform Circular Motion	255
Gravity	265
Circular Motion Terminology	270
Gravity and the Motion of the Planets	273
Module 9 : Work and Energy	
Introduction	289
The Definitions of Work and Energy	289
The Mathematical Definition of Work	290
Kinetic and Potential Energy	292
the First Law of Thermodynamics	296
Experiment 9.1	302
Friction, Work, and Energy	304
Energy and Power	310

Module 10 : Momentum

Introduction	325
Definition of Momentum	325
Impulse	326
Experiment 10.1	329
The Conservation of Momentum	333
The Mathematics of Momentum Conservation	336
Angular Momentum	341

Module 11 : Periodic Motion

Introduction	355
Hooke's Law	355
Experiment 11.1 : Hooke's Law	355
Uniform Circular Motion, An Example of Periodic Motion	361
Experiment 11.2 : The Characteristics of a Mass/Spring System	363
Potential Energy in a Compressed or Stretched Spring	371
The Simple Pendulum	377

Module 12 : Waves and Optics

Introduction	391
Waves	391
The Physical Nature of Sound	393
Light Waves	397
The Law of Reflection	400
Experiment 12.1 : The Law of Reflection	401
Flat Mirrors	403
Curved Mirrors	404
Snell's Law of Refraction	413
Lenses	417
The Human Eye	420

Module 13 : Electrostatics

Introduction	433
The Basics of Electrical Charge	433
Experiment 13.1	434
Experiment 13.2: Making and Using an Electroscope	436
Electrostatic Force and Coulomb's Law	440
Multiple Charges and the Electrostatic Force	444
The Electric Field	449
Application of Coulomb's Law to the Bohr Model of the Atom	453

Module 14 : Electrodynamics

Introduction	465
Electrical Potential	465
Electrical Potential and Potential Energy	468
Conservation of Energy in Electrodynamics	469

Capacitors	479
How a Television Makes Its Picture	484
Module 15 : Electrical Circuits	
Introduction	499
Batteries, Circuits, and Conventional Current	499
Resistance	503
Experiment 15.1: Current and Resistance	503
Electrical Heaters	505
Electrical Power	507
Switches and Circuits	509
Series and Parallel Circuits	510
Fuses and Circuit Breakers	517
Current and Power in Series and Parallel Circuits	519
Analyzing More Complicated Circuits	521
Module 16 : Magnetism	
Introduction	535
Permanent Magnets	535
Magnetic Fields	537
How Magnets Become Magnetic	539
Experiment 16.1: Oersted's Experiment	539
Experiment 16.2: Diamagnetic, Paramagnetic, and Ferromagnetic	542
The Earth's Magnetic Field	543
The Magnetic Field of a Current-Carrying Wire	545
Using Magnets to Generate Electricity	547
Alternating Current	550
Some Final Thoughts	552
Glossary
